

PHONECLEAN by QI-NOW

The PHONECLEAN by QI-NOW will disinfect your phone with UV-C light and also charge wirelessly.

How does UV-C light sanitize?

The Three Types of UV Rays

UV light has three wavelength categories: UV-A, UV-B, and UV-C. UV-C light is a short-wavelength, ultraviolet light that breaks apart microorganisms RNA/DNA, leaving it unable to function or reproduce. In other words, UV-C light is germicidal (UV-UV-A and UV-B light are not). **UV-C neutralizes "superbugs" that have developed a resistance to antibiotics.**

UV-C light is harmful to our eyes, this is why it must be done within a controlled environment.

UV-C light penetrates the cell and disrupts the RNA/DNA, killing the pathogen.

UV-C light is not hot, so while it effectively kills bacteria, it will not hurt your phone or other items.

Compatible with most phones that are no more than inches 7 L x 3.9 W x 0.8 H.
iPhone 11/11 PRO/11 PRO MAX/XR/Xs Max/
XS/ X/ 8/ 8 Plus,
Samsung Galaxy S9/S9+/S8/S8+/S7/Note 8, LG

Disinfect your phone in 10 minutes!
